

Dual IMSI

Short description

G&D's Dual IMSI application allows the mobile phone user to store two different subscriptions on the same SIM card. Thus, the subscriber can manage two accounts on one handset.

Operator benefits

- Attractive service especially for business people, freelancers etc. because of easy, separate billing for two accounts (B2B).
- For reasons of convenience, end users will stay with the operator who offers Dual IMSI service rather than switch to a second handset with a potentially different operator
- No second handset needed – no second handset subsidised

G&D's scope of services

- G&D Dual IMSI application

Islandssimi, Iceland, successfully works with G&D's Dual IMSI application

Islandssimi C

Detailed description

G&D's Dual IMSI application allows customers to have two different subscriptions and phone numbers on a single SIM card, with two IMSI and Ki pairs. The service targets subscribers who want to manage and control two subscriptions, e.g. one for business and one for private calls.

The application is stored on the SIM – without the customer necessarily knowing. Activation or deactivation of the Dual IMSI application service is possible during the SIM card's life cycle, e.g. via OTA. Therefore an operator is able to activate the service for customers who have subscribed.

Once activated, the application allows the selection of different subscriptions via the SAT menu.
