

Mobile E-mail

Short description

G&D's mobile e-mail application allows the subscriber to send an SMS as an e-mail directly to any e-mail account. This service is also available from abroad.

Operator benefits

- Easy solution to allow subscribers to send e-mail via SMS
- Generates additional (SMS) traffic
- Interesting for business users
- Ease of use for your customers due to simple menu structure

G&D's scope of products

- G&D mobile e-mail application

Detailed description

The user is able to send an SMS to an e-mail account in the following format:

e-mail@address.xy(subject)message

After selecting the menu point "SMS to e-mail", the user is requested to enter an e-mail address. This can be done:

1. by entering the e-mail address itself, or
2. selecting a previously stored e-mail address in a dedicated address book

P&T Luxembourg uses G&D's mobile e-mail application since November 2002

After the address has been selected, a new screen is displayed prompting the entry of the subject. After confirmation of the subject, a new screen is displayed prompting the entry of the message. Then an SMS is sent to a defined short number.

The whole message, including the brackets, must not be longer than 160 characters. Upon reaching 160 characters, data entry must be blocked by the application.

The user can store up to ten e-mail addresses in the application.

Network infrastructure for e-mail application
